

Zappi (myenergi) Onboarding

Before you Start!

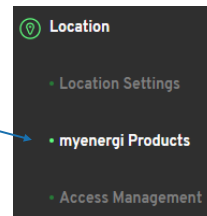

Have your Square Up Charging URL / Server Address to hand (starting WSS://)
This is provided after adding your Charger into the Square Up Charging portal

Zappi Compatibility Requirements

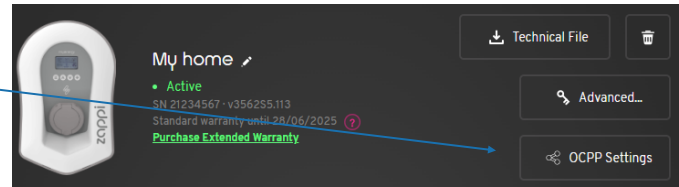

- Have a myenergi account (<https://myaccount.myenergi.com/login>)
- Completed 'location setup' on your myenergi account
- Have a Zappi with Built-In Wifi (the serial number of the Zappi will start with a 2)

Step by Step

1. Go to your myenergi account <https://myaccount.myenergi.com/login> and selection **Location** then **myenergi Products**.
If Location Button is not found, then first complete your locations information

2. Find your Zappi and select **OCPP Settings**.
Then select **'OTHER'** to allow configuration of the Square Up Charging server details.

3. In the **Backend URL field**:
 - Enter your Square Up Charging server address (starting WSS://).
 - Ensure the last character is a forward slash (/)

(Your Square Up Charging server address is provided in your Square Up Charging portal when adding the charger to your profile)

There is no need to change the information in the **Chargebox ID, Username or Authorization Key** fields

The Charger will then reboot and start connecting to the Square Up Charging server.
You will be able to see the 'Connected' status in your Square Up Charging portal after around 10 minutes.
